Assessment of documentation on PTFE membranes

JP Air Tech has asked Eurofins Product Testing to conduct an assessment of the raw material documentation received from their supplier of PTFE-membranes.

The manufacturer states that all PTFE-membranes sold to JP Air Tech are manufactured in accordance with FDA 21 CFR § 177.1550 on Perfluorocarbon resins.

The manufacturer furthermore states that all extractive residue and fluoride extractives, including water, n-heptane, 50% ethanol and ethyl acetate are in accordance with FDA 21 CFR § 177.1550.

Based on this information the PTFE-membranes from the supplier in question can be safely used according to the specifications in § 177.1550 on Perfluorocarbon resins for contact with food.

Do not hesitate to contact me if you have any questions.
