## Assessment of documentation on Polyester

JP Air Tech has asked Eurofins Product Testing to conduct an assessment of the raw material documentation received from their supplier of Polyester.

The assessment concerns the following product numbers:

JX130B, JX180, JX180B, JX260, JX240B and JX260B

The manufacturer has provided a test report on the Polyester according to FDA 21 CFR § 177.2420 on Polyester resins.

The test results state that total extractive residues and Chloroform-soluble extractive residues are in accordance with FDA 21 CFR § 177.2420.

Based on this information the Polyester from the supplier in question comply with the test requirements according to FDA 21 CFR § 177.2420.

Do not hesitate to contact me if you have any questions.
